

Software Requirements Specification (SRS)

Makeni Prayer Book: Catholic Companion

Document Version: 1.0

Project: Makeni Prayer Book: Catholic Companion

Platform: Flutter (Android & iOS)

Document Type: Software Requirements Specification (SRS)

Standard: Based on IEEE 29148 Software and System Requirements Engineering (adapted for Agile Product Development)

Status: Draft v1.0

Document Information

Field	Value
Product Name	Makeni Prayer Book: Catholic Companion
Document Type	Software Requirements Specification
Version	1.0
Status	Draft
Related Documents	PRD v1.0, TRD (Planned), SDD (Planned), Design System (Planned)
Primary Audience	Software Engineers, QA Engineers, Solution Architects, Product Owner, UI/UX Designers

Revision History

Version	Date	Description
1.0	Initial Draft	First release of the SRS

Chapter 1 — Introduction

1.1 Purpose

This Software Requirements Specification (SRS) defines the functional, non-functional, interface, security, privacy, accessibility, and data requirements for the Makeni Prayer Book: Catholic Companion application.

The purpose of this document is to provide a complete, precise, and testable specification that guides software design, implementation, quality assurance, deployment, and future maintenance.

Unlike the Product Requirements Document (PRD), which focuses on business goals and product vision, this SRS translates those goals into software requirements that can be implemented and verified by the engineering team.

1.2 Scope

Makeni Prayer Book: Catholic Companion is an offline-first mobile application designed to provide a premium digital experience for reading and interacting with the Makeni Prayer Book.

The application shall preserve the authenticity of the official prayer and hymn content while enhancing usability through modern technology.

The system shall support:

- Structured prayer and hymn content
- Premium reading experience
- Offline access
- Intelligent search
- Quick Numeric Navigation

- Prayer reminders
- Liturgical calendar support
- Personal notes
- Prayer journal
- Bookmarks
- Favorites
- Reading history
- Accessibility features
- Privacy-first data handling
- Future extensibility for additional Catholic resources

Version 1.0 targets Android and iOS using a single Flutter codebase.

1.3 Product Overview

Makeni Prayer Book: Catholic Companion is not intended to be a PDF reader.

Instead, it is a structured digital platform that transforms the traditional prayer book into an intelligent, searchable, offline-first Catholic companion.

The platform is designed around five core principles:

- Sacred Simplicity
- Offline First
- Privacy by Design
- Accessibility by Default
- Faithfulness to Official Catholic Content

The application shall provide a calm, distraction-free environment that encourages prayer, reflection, and worship.

1.4 Product Objectives

The primary objectives of the system are:

- Provide complete offline access to official prayer and hymn content.
- Deliver a premium reading experience optimized for mobile devices.
- Enable fast navigation through intelligent search and Quick Numeric Navigation.
- Support personal spiritual growth through bookmarks, notes, journals, and collections.
- Respect user privacy by keeping personal information on the device by default.

- Provide a modular architecture that supports future expansion.
-

1.5 Intended Audience

This document is intended for:

- Product Owner
 - Software Architects
 - Flutter Developers
 - Backend Developers
 - QA Engineers
 - UI/UX Designers
 - DevOps Engineers
 - Technical Writers
 - Future Project Contributors
-

1.6 Definitions

Term	Definition
Prayer	Official prayer contained within the Makeni Prayer Book.
Hymn	Official hymn contained within the Makeni Prayer Book.
Quick Numeric Navigation	Direct navigation using official hymn or prayer numbers from the printed edition.
Content Package	A structured collection of verified prayers, hymns, metadata, and search information distributed with or to the application.
Spiritual Companion	Personalized area providing reminders, recommendations, reading progress, and spiritual tools.
Liturgical Calendar Engine	The component responsible for determining liturgical seasons, feast days, solemnities, and related metadata.
Privacy Center	Centralized interface where users manage privacy settings and review stored data.
Structured Content	Official content stored as structured records rather than PDF pages.

1.7 Acronyms

Acronym	Meaning
PRD	Product Requirements Document
SRS	Software Requirements Specification
TRD	Technical Requirements Document
SDD	Software Design Document
UI	User Interface
UX	User Experience
API	Application Programming Interface
JSON	JavaScript Object Notation
SQLite	Local relational database used for offline storage
FTS	Full-Text Search
ADR	Architecture Decision Record
QA	Quality Assurance
CI/CD	Continuous Integration / Continuous Deployment

1.8 References

This document references the following project documentation:

- Product Requirements Document (PRD) v1.0
- Product Vision Statement
- Privacy Charter
- Design Philosophy
- Architecture Decision Records (ADRs)
- UI/UX Design System (planned)
- Technical Requirements Document (planned)
- Software Design Document (planned)

External references include:

- IEEE 29148 Systems and Software Requirements Engineering

- Material Design 3 Guidelines
 - Apple Human Interface Guidelines
 - Flutter Documentation
-

1.9 Assumptions

The following assumptions apply:

- Users may have limited or no internet connectivity.
 - Core functionality must operate completely offline.
 - Official prayer and hymn content is available in a structured digital format before distribution.
 - Users are not required to create an account to access core functionality.
 - Flutter provides the primary cross-platform framework.
-

1.10 Constraints

The system shall operate within the following constraints:

- Single Flutter codebase for Android and iOS.
 - Offline-first architecture.
 - Local-first data storage.
 - Official content integrity must be preserved.
 - Authentication is not required for Version 1.0 core functionality.
 - Future cloud features shall remain optional.
-

1.11 Requirement Classification

Requirements in this document are classified as follows:

Prefix	Category
SRS-FR	Functional Requirements
SRS-NFR	Non-Functional Requirements
SRS-UI	User Interface Requirements

SRS-DATA	Data Requirements
SRS-SEC	Security Requirements
SRS-PRV	Privacy Requirements
SRS-ACC	Accessibility Requirements
SRS-INT	Integration Requirements
SRS-PERF	Performance Requirements

Each requirement shall have a unique identifier and shall be traceable to the Product Requirements Document.

1.12 Requirement Traceability

Every requirement defined within this SRS shall:

- Map to one or more Product Requirements.
- Be independently testable.
- Have measurable acceptance criteria.
- Support future traceability into design documents, implementation tasks, and quality assurance artifacts.

A complete Requirement Traceability Matrix shall be included as an appendix after all requirements have been finalized.

1.13 Document Organization

This SRS is organized into the following chapters:

1. Introduction
2. Overall Description
3. Functional Requirements
4. External Interface Requirements
5. Non-Functional Requirements
6. Data Requirements
7. System Models
8. Verification & Validation
9. Appendices

Each chapter builds upon the previous one, progressing from product context to detailed software behavior and verification requirements.

Chapter 3 – Functional Requirements

3.1 Home Module

Module Overview

Purpose

The Home Module serves as the primary entry point into the application. It provides users with a calm, welcoming, and personalized dashboard that enables quick access to prayers, hymns, recently viewed content, bookmarks, collections, reminders, liturgical information, and the Spiritual Companion.

The Home Module shall prioritize simplicity, clarity, and speed while minimizing cognitive load.

Responsibilities

The Home Module shall:

- Welcome the user.
- Display the current liturgical season.
- Display today's date.
- Display the liturgical day (when available).
- Provide Quick Search.
- Provide Quick Numeric Navigation.
- Display Continue Reading.
- Display Favorite Prayers.

- Display Favorite Hymns.
 - Display Recent Activity.
 - Display Prayer Recommendations.
 - Display Daily Inspiration.
 - Display Upcoming Prayer Reminders.
 - Provide entry points to all major modules.
-

Dependencies

The Home Module depends upon:

- Reader Module
 - Search Module
 - Prayer Companion Module
 - Reminder Engine
 - Liturgical Calendar Engine
 - Recommendation Engine
 - Local Database
 - Settings Module
 - Content Engine
-

SRS-FR-001

Flutter Module	home
Source	PRD – Home Dashboard

Description

The application shall display the Home Dashboard immediately after launch.

Inputs

- Application startup.

Outputs

- Home Dashboard displayed.

Preconditions

- Application initialized successfully.

Postconditions

- User can access all primary features.

Business Rules

- Dashboard shall load without internet.
- Dashboard shall remain responsive.
- Dashboard shall load in under two seconds.

Acceptance Criteria

- Dashboard loads successfully.
- No internet required.
- No loading errors.
- Meets performance targets.

SRS-FR-002

Requirement Name

Continue Reading

Field	Value
Requirement ID	SRS-FR-002
Module	Home
Priority	P0
Requirement Level	MUST

Description

The application shall display the user's most recently opened prayer or hymn and allow them to resume reading with a single tap.

Acceptance Criteria

- Correct content displayed.
 - Opens at last reading position.
 - Works offline.
 - Updates automatically after each reading session.
-

SRS-FR-003

Requirement Name

Quick Search

Field	Value
Requirement ID	SRS-FR-003
Priority	P0

Description

The Home Dashboard shall provide immediate access to the global search engine.

Acceptance Criteria

- Search accessible within one tap.
 - Opens instantly.
 - Keyboard automatically focused.
-

SRS-FR-004

Requirement Name

Quick Numeric Navigation

Description

The Home Dashboard shall provide a Quick Jump input where users may enter:

- Prayer Number
- Hymn Number
- Page Number (where applicable)

The application shall immediately navigate to the corresponding structured content.

Business Rules

The search shall recognize:

- 45
- Hymn 45
- H45
- Prayer 23
- P23
- Pg 112
- Page 112

The application shall intelligently interpret user intent.

Acceptance Criteria

Navigation occurs within the defined performance budget.

SRS-FR-005

Requirement Name

Today's Liturgical Information

Description

The Home Dashboard shall display:

- Current Liturgical Season
- Feast Day (if applicable)

- Memorial
- Solemnity
- Optional Memorial
- Liturgical Color

The information shall be generated by the Liturgical Calendar Engine.

SRS-FR-006

Requirement Name

Daily Inspiration

Description

The application shall present a short inspirational quotation selected from approved Catholic sources.

Future versions may rotate content through structured content updates without requiring a full application update.

SRS-FR-007

Requirement Name

Prayer Recommendations

Description

The Recommendation Engine shall suggest relevant prayers based on:

- Time of day
- Liturgical season
- Recently viewed prayers
- Frequently accessed prayers
- User favorites
- Feast days
- Personal reminder schedule

Recommendations shall be generated entirely offline.

SRS-FR-008

Requirement Name

Upcoming Prayer Reminders

Description

The Home Dashboard shall display the user's next scheduled reminder.

Selecting the reminder shall navigate directly to the associated prayer.

SRS-FR-009

Requirement Name

Recently Viewed

Description

The Home Dashboard shall display recently opened prayers and hymns.

Recently viewed history shall remain entirely local to the device.

SRS-FR-010

Requirement Name

Favorites Preview

Description

The Home Dashboard shall display a preview of the user's favorite prayers and hymns.

Selecting an item shall open the corresponding content immediately.

SRS-FR-011

Requirement Name

Collections Preview

Description

The application shall display user-created collections on the Home Dashboard for quick access.

SRS-FR-012

Requirement Name

Daily Prayer Progress (Optional)

Description

If enabled by the user, the Home Dashboard may display:

- Daily prayers completed
- Reading streak
- Time spent reading

This feature shall remain optional and entirely local.

SRS-FR-013

Requirement Name

Offline Status

Description

The application shall continue to function normally without internet connectivity.

The Home Dashboard shall never display unnecessary offline warnings unless a cloud-only feature is requested.

SRS-FR-014

Requirement Name

Adaptive Dashboard

Description

The Home Dashboard shall personalize itself based on user behavior while maintaining a consistent layout.

Examples include:

- Frequently opened prayers
- Preferred reading times
- Commonly accessed hymn categories
- Active liturgical season

Personalization shall occur locally and shall not require cloud processing.

SRS-FR-015

Requirement Name

Dashboard Performance

Description

The Home Dashboard shall meet the following targets:

- Cold Startup < 2 seconds
- Warm Startup < 1 second
- Dashboard Rendering < 300 ms
- Search Availability < 100 ms
- Quick Jump < 80 ms

These targets shall be verified through performance testing before release.

Module Acceptance Criteria

The Home Module shall be considered complete when:

- Home Dashboard loads successfully.
- Continue Reading functions correctly.
- Search is accessible immediately.
- Quick Numeric Navigation locates prayers, hymns, and page references accurately.
- Liturgical information displays correctly.
- Recommendations function offline.
- Favorites and collections are accessible.
- Reminder shortcuts work.
- Dashboard personalization respects privacy.
- Performance budgets are consistently achieved.
- All functionality operates without requiring user authentication or internet connectivity.

Chapter 3 – Functional Requirements

Module 3.2 — Reader Module

Module Overview

Purpose

The Reader Module is the core component of Makeni Prayer Book: Catholic Companion. It is responsible for presenting prayers and hymns in a premium, distraction-free reading environment while preserving the authenticity and structure of the official Makeni Prayer Book.

The module shall provide an elegant, fast, accessible, and offline-first reading experience that supports users during personal prayer, liturgical celebrations, choir practice, and spiritual reflection.

The Reader Module shall prioritize readability, performance, accessibility, and simplicity.

Responsibilities

The Reader Module shall:

- Display structured prayers.
 - Display structured hymns.
 - Render headings, verses, responses, and rubrics correctly.
 - Support premium typography.
 - Support light, dark, sepia, and AMOLED themes.
 - Support adaptive spacing.
 - Support adjustable font sizes.
 - Support bookmarks.
 - Support favorites.
 - Support highlights.
 - Support notes.
 - Support prayer journaling.
 - Restore reading position.
 - Support Quick Numeric Navigation.
 - Navigate from Search results.
 - Navigate from Recommendations.
 - Navigate from Reminders.
 - Operate completely offline.
-

Dependencies

The Reader Module depends upon:

- Content Engine
 - Search Engine
 - Theme Engine
 - Typography Engine
 - Local Database
 - Settings Module
 - Bookmark Module
 - Journal Module
 - Recommendation Engine
 - Accessibility Module
-

SRS-FR-016

Display Structured Prayer

Field	Value
Requirement ID	SRS-FR-016
Module	Reader
Priority	P0
Requirement Level	MUST
Complexity	M
Risk	Critical

Verification	Test (T)
--------------	----------

Flutter Module	reader
----------------	--------

Source	PRD – Premium Reading Experience
--------	-------------------------------------

Description

The application shall display official prayer content using structured data rather than PDF pages.

Acceptance Criteria

- Prayer loads correctly.
 - Formatting is preserved.
 - Works offline.
 - Opens within 150 ms.
-

SRS-FR-017

Requirement Name

Display Structured Hymn

Description

The application shall display hymn content with proper verse numbering, chorus separation, formatting, and metadata.

Acceptance Criteria

- Verses correctly ordered.
- Chorus clearly identified.
- Responsive layout.
- Offline support.

SRS-FR-018

Requirement Name

Preserve Official Formatting

Description

The Reader shall preserve official formatting including:

- Titles
- Headings
- Rubrics
- Responses
- Verse numbering
- Chorus formatting
- Italics
- Bold emphasis
- Indentation

The structured representation shall faithfully reflect the printed Makeni Prayer Book.

SRS-FR-019

Requirement Name

Restore Reading Position

Description

The application shall automatically remember the user's last reading position for every prayer and hymn.

The user shall resume reading from the exact location where they previously stopped.

SRS-FR-020

Requirement Name

Adjust Font Size

Description

The Reader shall allow users to increase or decrease text size without affecting layout stability.

Supported sizes:

- Extra Small
- Small
- Medium
- Large
- Extra Large
- Accessibility Large

Changes shall be reflected immediately.

SRS-FR-021

Requirement Name

Typography Controls

Description

The Reader shall support premium typography settings including:

- Font family
- Font weight
- Line spacing
- Paragraph spacing
- Text alignment (where appropriate)

Typography shall remain optimized for long reading sessions.

SRS-FR-022

Requirement Name

Reading Themes

Description

The Reader shall provide the following themes:

- Light
- Dark
- Sepia
- AMOLED Black

Themes shall apply instantly without restarting the application.

SRS-FR-023

Requirement Name

Reading Layout Modes

Description

The Reader shall support:

- Standard Reading Mode
- Focus Mode
- Choir Mode
- Elder Mode

Each mode shall optimize spacing, typography, and controls for its intended use.

SRS-FR-024

Requirement Name

Immersive Reading Mode

Description

Users may enter an immersive reading mode where navigation bars and non-essential controls are hidden until requested.

This mode shall maximize the available reading area.

SRS-FR-025

Requirement Name

Bookmarks

Description

Users shall be able to bookmark prayers, hymns, and specific reading positions.

Bookmarks shall synchronize with the local database and remain available offline.

SRS-FR-026

Requirement Name

Favorites

Description

Users shall be able to mark prayers and hymns as favorites.

Favorites shall be accessible from the Home Dashboard, Search, and Favorites Module.

SRS-FR-027

Requirement Name

Highlights

Description

Users may highlight selected text using predefined highlight colors.

Highlights shall remain associated with the original content and persist locally.

SRS-FR-028

Requirement Name

Inline Notes

Description

Users shall be able to attach personal notes to specific prayers, hymns, or selected passages.

Notes shall be editable, searchable, and stored locally.

SRS-FR-029

Requirement Name

Prayer Journal Integration

Description

The Reader shall allow users to create or link journal entries directly from the currently opened prayer.

SRS-FR-030

Requirement Name

Share Reference

Description

Users may share a prayer or hymn reference (title and number) without sharing copyrighted content.

Where permitted by licensing, users may also share a short excerpt within defined limits.

SRS-FR-031

Requirement Name

Related Content

Description

The Reader shall display relevant related content, including:

- Similar prayers
 - Related hymns
 - Seasonal prayers
 - Feast day prayers
 - Cross references (future)
 - Bible references (future)
-

SRS-FR-032

Requirement Name

Quick Numeric Navigation

Description

While reading, users shall be able to jump directly to another prayer or hymn by entering its official number without returning to the Home Dashboard.

SRS-FR-033

Requirement Name

Reader Navigation

Description

The Reader shall support navigation from:

- Search Results
- Favorites
- Bookmarks
- Home Dashboard
- Prayer Recommendations
- Prayer Reminders
- Collections
- Reading History

Navigation shall preserve application state and reading context.

SRS-FR-034

Requirement Name

Accessibility Reading Support

Description

The Reader shall fully support:

- Screen readers
- Dynamic text sizing
- High contrast mode
- Reduced motion
- Keyboard navigation (where supported)
- VoiceOver (iOS)
- TalkBack (Android)

SRS-FR-035

Requirement Name

Reader Performance

Description

The Reader shall satisfy the following performance budgets:

- Open Prayer < 150 ms
- Open Hymn < 150 ms
- Theme Switch < 100 ms
- Font Resize < 100 ms
- Bookmark Save < 50 ms
- Favorite Toggle < 50 ms
- Restore Reading Position < 100 ms

Performance shall be validated before release.

SRS-FR-036

Requirement Name

Content Integrity

Description

The Reader shall display only verified structured content distributed through approved content packages.

User-generated notes, highlights, and bookmarks shall remain logically separate from official content to ensure that the original prayers and hymns are never modified.

SRS-FR-037

Requirement Name

Offline Reading

Description

All Reader functionality shall remain available without internet connectivity, including:

- Reading
- Typography
- Themes
- Notes
- Highlights
- Favorites
- Bookmarks
- Reading History
- Journal Integration
- Quick Navigation

The absence of network connectivity shall not degrade the reading experience.

Module Acceptance Criteria

The Reader Module shall be considered complete when:

- Structured prayers and hymns display accurately.
- Official formatting is preserved.
- Reading position is restored reliably.
- Typography and themes apply instantly.
- Focus, Choir, and Elder Modes function correctly.
- Bookmarks, favorites, highlights, and notes persist locally.
- Quick Numeric Navigation is available during reading.
- Navigation from all entry points works correctly.
- Accessibility requirements are fully satisfied.
- Official content integrity is maintained.
- All functionality operates offline.
- Performance targets are consistently achieved.

Chapter 3 – Functional Requirements

Module 3.3 — Search & Intelligent Navigation Module

Module Overview

Purpose

The Search & Intelligent Navigation Module provides fast, accurate, and intuitive access to all structured content within the Makeni Prayer Book.

Unlike traditional keyword search, this module supports natural language queries, official hymn and prayer numbering, page references, categories, liturgical filtering, and intelligent matching.

The module shall enable users to locate any prayer or hymn within seconds, whether they know its title, number, category, or only part of its content.

The module is designed to replicate and improve the familiar experience of navigating the printed Makeni Prayer Book.

Responsibilities

The Search Module shall:

- Search prayers.
- Search hymns.
- Search titles.
- Search subtitles.
- Search body text.
- Search categories.
- Search keywords.
- Search themes.

- Search page references.
 - Search hymn numbers.
 - Search prayer numbers.
 - Support fuzzy matching.
 - Support typo correction.
 - Support partial matches.
 - Support recent searches.
 - Support search suggestions.
 - Support voice search (future).
 - Operate completely offline.
-

Dependencies

The Search Module depends upon:

- Content Engine
 - Search Index
 - SQLite FTS Engine
 - Reader Module
 - Recommendation Engine
 - Local Database
 - Settings Module
-

SRS-FR-038

Requirement Name

Global Search

Field	Value
Requirement ID	SRS-FR-038

Module	Search
--------	--------

Priority	P0
----------	----

Requirement Level	MUST
-------------------	------

Complexity	L
------------	---

Verification	Test (T)
--------------	----------

Flutter Module	search
----------------	--------

Description

The application shall provide a global search engine capable of searching all structured content.

Search shall operate entirely offline.

SRS-FR-039

Requirement Name

Title Search

Description

Users shall be able to locate prayers and hymns using complete or partial titles.

Example:

Holy Spirit

Results shall update instantly while typing.

SRS-FR-040

Requirement Name

Full Text Search

Description

The application shall search the complete content of every prayer and hymn.

Example:

Our Father

Mercy

Holy Mary

Peace

Results shall highlight matching words.

SRS-FR-041

Requirement Name

Quick Numeric Navigation

Description

The application shall recognize official prayer and hymn numbering.

Supported inputs include:

45

145

Prayer 17

P17

H145

Hymn 145

The corresponding prayer or hymn shall open immediately.

SRS-FR-042

Requirement Name

Page Navigation

Description

The application shall recognize printed page references where available.

Examples:

Page 220

Pg220

220

If a page reference maps uniquely to a prayer or hymn, the application shall navigate directly to that content.

SRS-FR-043

Requirement Name

Intelligent Search Recognition

Description

The search engine shall automatically determine user intent.

Examples:

Input	Interpretation
145	Hymn 145 or Page 145 (based on available data)
Morning Prayer	Prayer Title
Mercy	Full-text keyword

Advent	Liturgical category
--------	---------------------

Funeral	Category
---------	----------

Holy Spirit	Title or keyword
-------------	------------------

Thanksgiving	Category
--------------	----------

The most relevant result shall appear first.

SRS-FR-044

Requirement Name

Fuzzy Search

Description

The search engine shall tolerate minor spelling mistakes.

Examples:

Marcy

Mercie

Haly Spirit

Thanksgivin

Relevant results shall still be returned.

SRS-FR-045

Requirement Name

Search Suggestions

Description

While typing, the application shall display live suggestions including:

- Prayer titles
- Hymn titles
- Categories
- Frequently searched items
- Recently opened content

Suggestions shall update in real time.

SRS-FR-046

Requirement Name

Search Filters

Description

Users shall be able to filter results by:

- Prayer
- Hymn
- Category
- Liturgical Season
- Favorites
- Bookmarked

- Recently Viewed
- Collections

Future versions shall support filtering by language and content package.

SRS-FR-047

Requirement Name

Search Result Ranking

Description

Results shall be ranked using a relevance algorithm considering:

- Exact title matches
- Official prayer/hymn numbers
- Keyword frequency
- User favorites
- Recent activity
- Liturgical relevance

Exact matches shall always take precedence.

SRS-FR-048

Requirement Name

Highlighted Search Results

Description

Matching words within search results shall be visually highlighted to improve readability and scanning.

SRS-FR-049

Requirement Name

Recent Searches

Description

The application shall maintain a history of recent searches stored locally.

Users shall be able to:

- Reopen previous searches.
 - Remove individual entries.
 - Clear search history.
-

SRS-FR-050

Requirement Name

Voice Search (Future)

Description

Future versions may allow users to search using voice commands.

Example:

"Open Hymn 145"

"Morning Prayer"

Voice processing shall remain optional and clearly indicated if it requires internet services.

SRS-FR-051

Requirement Name

Zero Results Handling

Description

If no results are found, the application shall:

- Display a friendly message.
- Suggest similar content.
- Recommend related categories.
- Offer spelling suggestions.
- Provide Quick Jump options.

Users shall never encounter an empty or confusing search experience.

SRS-FR-052

Requirement Name

Offline Search

Description

All search capabilities, including full-text search, numeric navigation, and filtering, shall function entirely offline.

No network connection shall be required.

SRS-FR-053

Requirement Name

Search Performance

Description

The Search Engine shall satisfy the following performance targets:

- Search startup < 100 ms

- Live suggestion update < 50 ms
- Full-text search < 100 ms
- Quick Jump < 80 ms
- Open selected result < 150 ms

Performance shall be validated using representative datasets.

SRS-FR-054

Requirement Name

Search Analytics (Optional)

Description

If the user explicitly opts into anonymous analytics, the application may collect aggregated search metrics to improve future versions.

The application shall never collect:

- Personal notes.
- Journal entries.
- Search text linked to an identifiable user.
- Prayer content.

Analytics shall remain anonymous, optional, and privacy-preserving.

SRS-FR-055

Requirement Name

Future AI-Assisted Search

Description

Future versions may provide AI-assisted search capable of interpreting natural language requests such as:

- "Prayer for someone who is sick."
- "A hymn about hope."
- "Prayer before an exam."
- "Prayer for traveling."

AI-generated suggestions shall supplement, but never alter, official Catholic content.

Module Acceptance Criteria

The Search & Intelligent Navigation Module shall be considered complete when:

- Users can locate prayers and hymns by title, keyword, number, or page reference.
- Quick Numeric Navigation correctly interprets printed hymn and prayer numbers.
- Full-text search returns accurate and relevant results.
- Fuzzy search handles common spelling mistakes.
- Search suggestions appear in real time.
- Filters work correctly across all supported content.
- Search remains fully functional offline.
- Performance targets are consistently achieved.
- Privacy principles are maintained for search history and optional analytics.
- The module provides a fast, intuitive experience suitable for use during Mass, personal prayer, and choir practice.

Chapter 3 – Functional Requirements

Module 3.4 — Prayer & Hymn Library Module

Module Overview

Purpose

The Prayer & Hymn Library Module serves as the central content discovery hub for Makeni Prayer Book: Catholic Companion.

Unlike the printed Makeni Prayer Book, which relies on a traditional table of contents and page numbers, the digital library shall provide multiple intuitive ways to discover, browse, filter, and navigate content while preserving the familiarity of the official book.

The Library shall function as a premium digital library similar in quality to Apple Books and Kindle, while maintaining a calm, uncluttered, and spiritually focused experience.

The Library shall integrate seamlessly with the Intelligent Navigation Engine (INE), Search Engine, Reader Module, and Prayer Companion.

Design Principles

The Library shall follow these principles:

- Sacred Simplicity
 - Content First
 - Familiar to Catholic Users
 - Fast Discovery
 - Offline First
 - Minimal Cognitive Load
 - Accessibility by Default
-

Responsibilities

The Library Module shall:

- Display all prayers.
- Display all hymns.
- Display structured categories.
- Display liturgical groupings.
- Display alphabetical indexes.
- Display numerical indexes.
- Display recently viewed content.

- Display favorites.
 - Display bookmarks.
 - Display user collections.
 - Support intelligent browsing.
 - Support quick filtering.
 - Support Intelligent Navigation Engine integration.
 - Operate entirely offline.
-

Dependencies

The Library Module depends upon:

- Content Engine
 - Search Engine
 - Intelligent Navigation Engine (INE)
 - Reader Module
 - Recommendation Engine
 - Local Database
 - Settings Module
-

SRS-FR-056

Requirement Name

Library Dashboard

Description

The application shall provide a dedicated Library screen that acts as the primary browsing interface for all prayers and hymns.

The Library shall present content using clean cards, grouped lists, and expandable sections.

SRS-FR-057

Requirement Name

Prayer Library

Description

The application shall provide a structured library containing every official prayer.

Each prayer shall include:

- Official title
 - Prayer number (where applicable)
 - Category
 - Liturgical metadata
 - Search keywords
 - Reading status
 - Favorite indicator
 - Bookmark indicator
-

SRS-FR-058

Requirement Name

Hymn Library

Description

The application shall provide a structured library containing every official hymn.

Each hymn shall include:

- Hymn number
 - Official title
 - Category
 - Liturgical season (if applicable)
 - Search keywords
 - Favorite indicator
 - Bookmark indicator
 - Recently viewed status
-

SRS-FR-059

Requirement Name

Category Browsing

Description

Users shall browse content by categories such as:

- Morning Prayers
- Evening Prayers
- Marian Prayers
- Eucharistic Prayers
- Family Prayers
- Children's Prayers
- Funeral Prayers
- Advent
- Christmas
- Lent
- Easter
- Pentecost
- Ordinary Time
- Choir Hymns
- Seasonal Hymns

Categories shall remain configurable through future content packages.

SRS-FR-060

Requirement Name

Alphabetical Index

Description

The Library shall provide an alphabetical index of prayers and hymns for users who know the title but not the category or number.

Selecting an item shall open it immediately in the Reader Module.

SRS-FR-061

Requirement Name

Numerical Index

Description

The Library shall provide an official numerical index reflecting the printed Makeni Prayer Book.

Users shall browse:

- Prayer Numbers
- Hymn Numbers
- Page References (where applicable)

This preserves familiarity for users transitioning from the printed edition.

SRS-FR-062

Requirement Name

Expandable Sections

Description

Content shall be grouped into collapsible sections to reduce scrolling and improve discoverability.

Examples include:

- Liturgical Seasons
- Prayer Categories
- Hymn Categories
- Favorites

- Recently Viewed

The expanded/collapsed state shall be remembered locally.

SRS-FR-063

Requirement Name

Recently Viewed

Description

The Library shall provide a dedicated Recently Viewed section showing the user's reading history.

Users may reopen content directly from this list.

Reading history shall remain entirely local unless future cloud synchronization is explicitly enabled.

SRS-FR-064

Requirement Name

Favorites

Description

The Library shall provide a dedicated Favorites section containing bookmarked prayers and hymns.

Users shall be able to sort favorites by:

- Title
- Number
- Recently Added
- Frequently Opened

SRS-FR-065

Requirement Name

Collections

Description

Users shall create custom collections such as:

- Wedding
- Choir Practice
- Morning Routine
- Lent
- Advent
- Family Prayer
- Personal Retreat

Collections shall support manual organization and future smart recommendations.

SRS-FR-066

Requirement Name

Smart Library Recommendations

Description

The Recommendation Engine shall surface relevant prayers and hymns within the Library based on:

- Liturgical season
- Frequently accessed content
- Recently viewed items
- Favorites
- User-defined reminders

Recommendations shall operate entirely offline.

SRS-FR-067

Requirement Name

Library Integration with Intelligent Navigation Engine

Description

Every Library item shall integrate with the Intelligent Navigation Engine (INE).

Users may navigate using:

- Official prayer numbers
- Official hymn numbers
- Page references
- Deep links (future)
- Shared references (future)

Navigation shall preserve reading context and history.

SRS-FR-068

Requirement Name

Contextual Actions

Description

Each prayer or hymn in the Library shall provide contextual actions, including:

- Open
- Favorite
- Bookmark
- Add to Collection
- Add Reminder

- View Details
- Share Reference
- View Related Content

Actions shall be available without cluttering the interface.

SRS-FR-069

Requirement Name

Library Performance

Description

The Library shall satisfy the following performance targets:

- Library startup < 250 ms
- Category expansion < 50 ms
- Open prayer/hymn < 150 ms
- Filter application < 100 ms
- Sorting < 100 ms
- Navigation < 80 ms

Performance shall remain consistent regardless of the number of content packages installed.

SRS-FR-070

Requirement Name

Offline Library

Description

All Library functionality shall operate without internet connectivity.

Users shall browse, filter, organize, and access all installed content while offline.

Cloud connectivity shall only enhance optional services and shall never be required for core library functionality.

Future Expansion

The Library architecture shall support additional content packages without redesign, including:

- Catholic Bible
- Catechism of the Catholic Church
- Lives of the Saints
- Daily Mass Readings
- Novenas
- Rosary Guides
- Diocese-specific Prayer Books
- Multi-language editions

The Library shall automatically organize future content into the existing browsing and navigation structure.

Module Acceptance Criteria

The Library Module shall be considered complete when:

- Users can browse all prayers and hymns intuitively.
- Category, alphabetical, and numerical indexes function correctly.
- Expandable sections improve navigation without clutter.
- Favorites, bookmarks, collections, and recently viewed content are easily accessible.
- Intelligent recommendations enhance discovery while respecting user privacy.
- Integration with the Intelligent Navigation Engine enables seamless movement throughout the application.
- All functionality operates fully offline.
- The Library scales gracefully as new content packages are added in future releases.
- Performance targets are consistently achieved across supported devices.

Chapter 3 – Functional Requirements

Module 3.5 — Prayer Companion Module

Module Overview

Purpose

The Prayer Companion Module is the heart of the user's personal spiritual journey within Makeni Prayer Book: Catholic Companion.

Rather than acting as an AI chatbot or replacing spiritual guidance, the Prayer Companion serves as a quiet, respectful assistant that helps users build consistent prayer habits, rediscover meaningful prayers, organize personal devotions, and remain connected to the liturgical life of the Church.

The Prayer Companion shall always respect the user's privacy, operate primarily offline, and never alter or reinterpret official Catholic content.

Its purpose is to gently encourage prayer—not to distract from it.

Design Philosophy

The Prayer Companion shall embody the following principles:

- Encourage, never interrupt.
 - Recommend, never replace.
 - Guide, never overwhelm.
 - Respect silence and reflection.
 - Preserve official Catholic teachings.
 - Operate privately and locally by default.
-

Responsibilities

The Prayer Companion shall:

- Recommend prayers based on context.
 - Suggest hymns appropriate to the liturgical season.
 - Build personalized prayer routines.
 - Track optional prayer goals.
 - Manage prayer reminders.
 - Surface recently used content.
 - Suggest related prayers.
 - Maintain prayer history.
 - Support spiritual journaling integration.
 - Celebrate personal milestones.
 - Operate completely offline.
-

Dependencies

The Prayer Companion depends upon:

- Recommendation Engine
 - Reminder Engine
 - Intelligent Navigation Engine (INE)
 - Reader Module
 - Journal Module
 - Liturgical Calendar Engine
 - Local Database
 - Settings Module
-

SRS-FR-071

Requirement Name

Personalized Prayer Recommendations

Description

The Prayer Companion shall recommend prayers based on:

- Time of day
- Liturgical season

- Frequently read prayers
- Recently viewed content
- User favorites
- Upcoming feast days
- User-created routines

Recommendations shall be generated locally without requiring internet connectivity.

SRS-FR-072

Requirement Name

Daily Prayer Companion

Description

The application shall present a daily companion card that may include:

- Morning Prayer suggestion
- Midday Prayer suggestion
- Evening Prayer suggestion
- Night Prayer suggestion
- Seasonal recommendation

The card shall adapt to the user's preferences while remaining optional.

SRS-FR-073

Requirement Name

Prayer Routines

Description

Users shall create reusable prayer routines such as:

- Morning Routine

- Evening Routine
- Before Work
- Before School
- Family Prayer
- Rosary Routine
- Sunday Preparation
- Lent Routine
- Advent Routine

Each routine may contain one or more prayers and hymns.

SRS-FR-074

Requirement Name

Prayer Goals

Description

Users may define optional spiritual goals, including:

- Pray daily
- Complete Morning Prayer
- Pray the Rosary weekly
- Read selected prayers
- Build a consistent prayer habit

Goals shall remain entirely private and configurable.

SRS-FR-075

Requirement Name

Prayer Streaks

Description

If enabled by the user, the application may display prayer streaks based on completed routines or prayer sessions.

Users may disable this feature at any time to avoid unnecessary gamification.

The design shall encourage consistency without creating pressure or competition.

SRS-FR-076

Requirement Name

Prayer History

Description

The application shall maintain a private history of recently accessed prayers and hymns.

Users shall be able to:

- Continue previous sessions.
- Clear history.
- Disable history tracking.

History shall remain stored locally.

SRS-FR-077

Requirement Name

Context-Aware Recommendations

Description

The Recommendation Engine shall consider:

- Liturgical season
- Time of day

- Favorite prayers
- Active prayer routines
- Upcoming reminders
- Frequently opened hymns
- Recently completed prayers

The engine shall never require cloud-based personalization.

SRS-FR-078

Requirement Name

Spiritual Reflection Prompts

Description

The Prayer Companion may optionally provide gentle reflection prompts after selected prayers.

Examples include:

- "Would you like to write a reflection?"
- "Save this prayer to your favorites?"
- "Add this prayer to a routine?"

Reflection prompts shall never interrupt prayer or appear excessively.

SRS-FR-079

Requirement Name

Prayer Journal Integration

Description

Users shall be able to create journal entries directly from Prayer Companion recommendations or completed prayer sessions.

Journal entries shall remain private and stored locally unless future synchronization is explicitly enabled.

SRS-FR-080

Requirement Name

Liturgical Companion

Description

The Prayer Companion shall integrate with the Liturgical Calendar Engine to recommend prayers and hymns appropriate to:

- Advent
- Christmas
- Lent
- Easter
- Pentecost
- Ordinary Time
- Solemnities
- Feast Days
- Memorials

Recommendations shall always align with official Catholic liturgical practices.

SRS-FR-081

Requirement Name

Gentle Reminder Integration

Description

The Prayer Companion shall coordinate with the Reminder Engine to provide respectful notifications for scheduled prayer routines.

Reminders shall be user-configurable and never mandatory.

SRS-FR-082

Requirement Name

Personal Collections Integration

Description

The Prayer Companion shall suggest adding frequently used prayers and hymns to personal collections when appropriate.

Suggestions shall remain optional and unobtrusive.

SRS-FR-083

Requirement Name

Offline Companion

Description

All Prayer Companion features—including recommendations, routines, history, and reminders—shall function without internet connectivity.

Cloud services shall only enhance optional features and shall never be required for the companion experience.

SRS-FR-084

Requirement Name

Description

The Prayer Companion shall process personalization locally.

Personal prayer history, routines, journal entries, and recommendations shall never be transmitted to external services unless the user explicitly enables a future synchronization feature.

SRS-FR-085

Requirement Name

Companion Performance

Description

The Prayer Companion shall satisfy the following performance targets:

- Recommendation generation < 100 ms
- Routine loading < 100 ms
- Reminder scheduling < 50 ms
- History retrieval < 50 ms
- Companion dashboard rendering < 200 ms

Performance shall remain consistent across supported devices.

Future Expansion

The Prayer Companion architecture shall support future capabilities including:

- Guided retreats
- Novena assistants
- Rosary companion
- Daily Mass readings integration
- Bible reading plans

- Saint of the Day
- Diocese announcements
- AI-assisted prayer discovery (strictly supplementary and clearly distinguished from official content)
- Family prayer synchronization (optional)
- Parish-specific devotional content (optional)

All future additions shall preserve the application's principles of privacy, simplicity, and fidelity to Catholic teaching.

Module Acceptance Criteria

The Prayer Companion Module shall be considered complete when:

- Personalized recommendations function accurately and entirely offline.
- Users can create and manage prayer routines.
- Optional goals and streaks encourage consistent prayer without promoting unhealthy gamification.
- Prayer history, routines, and journal integration remain private and locally stored.
- Liturgical recommendations align with the current season and feast days.
- Reminder integration functions reliably and respectfully.
- All personalization can be disabled or customized by the user.
- The companion experience remains calm, unobtrusive, and spiritually supportive.
- Performance targets are consistently achieved.
- The module operates without requiring user authentication or continuous internet connectivity.

Chapter 3 – Functional Requirements

Module 3.6 — Personal Workspace Module

(Bookmarks • Favorites • Highlights • Notes • Prayer Journal • Collections • Reading History)

Module Overview

Purpose

The Personal Workspace Module provides users with a private, organized space for engaging more deeply with the Makeni Prayer Book.

Rather than scattering personal features throughout the application, this module unifies bookmarks, favorites, highlights, notes, journals, collections, reading history, and spiritual progress into one coherent experience.

The module shall function entirely offline by default and maintain complete separation between official Catholic content and user-generated content.

Design Philosophy

The Personal Workspace shall:

- Preserve official content.
 - Encourage reflection.
 - Never distract from prayer.
 - Remain private.
 - Support long-term spiritual growth.
 - Feel calm and uncluttered.
-

Responsibilities

The module shall:

- Manage bookmarks.
- Manage favorites.
- Store highlights.
- Store personal notes.
- Manage prayer journals.
- Manage reading history.
- Manage collections.
- Organize user content.
- Restore reading sessions.
- Export personal data (future).
- Import personal backups (future).

Dependencies

The module depends upon:

- Reader Engine
 - Content Engine
 - Local Database
 - Secure Storage
 - Intelligent Navigation Engine
 - Search Engine
 - Settings Module
-

SRS-FR-086

Unified Personal Workspace

The application shall provide a dedicated Personal Workspace where users can access all personal content from a single location.

The Workspace shall contain:

- Bookmarks
 - Favorites
 - Highlights
 - Notes
 - Prayer Journal
 - Collections
 - Reading History
 - Saved Routines
-

SRS-FR-087

Bookmarks

Users shall bookmark:

- Entire prayers
- Hymns
- Specific reading positions

Bookmarks shall restore the exact reading location.

SRS-FR-088

Favorites

Users shall mark prayers and hymns as favorites.

Favorites shall be searchable and accessible throughout the application.

SRS-FR-089

Text Highlights

Users shall highlight selected passages using predefined colors.

Highlights shall remain visually distinct while preserving the official content beneath them.

Highlights shall synchronize with the Reader immediately.

SRS-FR-090

Personal Notes

Users shall attach notes to:

- Prayers

- Hymns
- Specific passages

Notes shall support:

- Rich text formatting (future)
- Tags
- Search
- Editing
- Deletion

Notes shall remain private.

SRS-FR-091

Prayer Journal

Users shall maintain a private prayer journal.

Journal entries may include:

- Title
- Date
- Reflection
- Linked prayer
- Linked hymn
- Mood (optional)
- Gratitude entries (optional)

Journal entries shall never modify official content.

SRS-FR-092

Collections

Users shall organize content into custom collections.

Examples include:

- Wedding
- Funeral
- Choir Practice
- Lent
- Advent
- Family Prayer
- Personal Retreat
- Daily Routine

Collections shall support drag-and-drop ordering in future releases.

SRS-FR-093

Reading History

The application shall maintain a chronological history of accessed prayers and hymns.

Users shall:

- Continue reading.
- Remove entries.
- Disable history.
- Clear history.

History shall remain stored locally.

SRS-FR-094

Search Personal Content

The Search Engine shall index user-generated content including:

- Notes
- Journal titles
- Collections

- Favorites
- Bookmarks

Search shall never index encrypted or protected content without user consent.

SRS-FR-095

Smart Suggestions

The Recommendation Engine may suggest:

- Frequently bookmarked prayers
- Frequently highlighted hymns
- Forgotten favorites
- Seasonal collections

Suggestions shall remain optional.

SRS-FR-096

Data Separation

Official Catholic content shall remain completely separated from:

- Notes
- Highlights
- Journal entries
- Favorites
- Reading history

Updates to official content shall never overwrite personal data.

SRS-FR-097

Backup & Restore (Future)

The application may allow encrypted export and import of personal workspace data.

Supported data may include:

- Bookmarks
- Favorites
- Notes
- Journals
- Collections
- Reading history

Cloud synchronization shall remain optional.

SRS-FR-098

Privacy Controls

Users shall control:

- Reading history
- Search history
- Journal visibility
- Analytics participation
- Local data deletion

Privacy controls shall be available from the Privacy Center.

SRS-FR-099

Workspace Performance

Performance targets:

- Bookmark save < 50 ms
- Favorite toggle < 50 ms

- Note save < 100 ms
- Journal save < 150 ms
- Workspace load < 250 ms

Performance shall remain consistent regardless of workspace size.

SRS-FR-100

Offline Workspace

All personal workspace functionality shall operate without internet connectivity.

No account or authentication shall be required.

Future Expansion

The architecture shall support:

- Encrypted cloud synchronization
 - Multi-device synchronization
 - Shared family prayer collections
 - Parish devotional collections
 - Smart prayer planning
 - AI-assisted organization (optional)
 - Markdown journal export
 - PDF journal export
 - Calendar integration
-

Module Acceptance Criteria

The Personal Workspace Module shall be considered complete when:

- Users can easily access all personal content from one place.
- Bookmarks, favorites, highlights, notes, and journals function correctly.

- Personal content remains separate from official Catholic content.
- Search indexes personal content accurately.
- Privacy controls function as expected.
- All data remains available offline.
- Performance targets are achieved.
- Future synchronization can be added without architectural changes.

Chapter 3 – Functional Requirements

Module 3.7 — Reminder Engine & Liturgical Calendar Module

Module Overview

Purpose

The Reminder Engine & Liturgical Calendar Module provides intelligent, respectful, and customizable reminders while integrating the official Catholic liturgical calendar into the user's daily prayer experience.

Rather than delivering generic notifications, this module adapts to user preferences, liturgical seasons, feast days, and personal prayer routines.

The module shall operate primarily offline using locally calculated schedules and device notifications.

Design Philosophy

The module shall:

- Encourage prayer without creating pressure.
 - Respect the user's schedule.
 - Follow the Church's liturgical calendar.
 - Remain fully functional offline.
 - Be entirely user-controlled.
 - Avoid notification fatigue.
-

Responsibilities

The module shall:

- Schedule prayer reminders.
 - Schedule routine reminders.
 - Display liturgical seasons.
 - Display feast days.
 - Display solemnities.
 - Display memorials.
 - Recommend seasonal prayers.
 - Manage quiet hours.
 - Respect Do Not Disturb mode.
 - Synchronize reminder settings across modules.
 - Operate offline.
-

Dependencies

The module depends upon:

- Reminder Engine
 - Liturgical Engine
 - Recommendation Engine
 - Content Engine
 - Local Notification Service
 - Local Database
 - Settings Module
-

SRS-FR-101

Requirement Name

Prayer Reminders

Description

Users shall create custom reminders for prayers, hymns, routines, and collections.

Each reminder may include:

- Title
- Linked prayer or hymn
- Time
- Days of week
- Frequency
- Optional note

Reminders shall be generated locally.

SRS-FR-102

Requirement Name

Prayer Routine Scheduling

Description

Users shall associate reminders with complete prayer routines rather than only individual prayers.

Example routines:

- Morning Prayer
- Evening Prayer
- Family Prayer
- Rosary
- Before Work

- Before School
-

SRS-FR-103

Requirement Name

Liturgical Calendar

Description

The application shall include an offline Liturgical Calendar Engine capable of calculating and displaying:

- Liturgical seasons
- Solemnities
- Feast days
- Memorials
- Optional memorials
- Holy days of obligation (where configured)

The calendar shall not require internet connectivity for normal operation.

SRS-FR-104

Requirement Name

Seasonal Recommendations

Description

Based on the current liturgical season, the application shall recommend relevant prayers and hymns.

Examples:

- Advent
- Christmas

- Lent
- Holy Week
- Easter
- Pentecost
- Ordinary Time

Recommendations shall be generated locally.

SRS-FR-105

Requirement Name

Feast Day Recommendations

Description

On feast days and solemnities, the application may present a dedicated recommendation card linking to appropriate prayers, hymns, or devotional content.

SRS-FR-106

Requirement Name

Quiet Hours

Description

Users shall define quiet hours during which non-critical reminders are automatically suppressed.

The application shall honor these preferences without requiring internet access.

SRS-FR-107

Requirement Name

Do Not Disturb Integration

Description

Where supported by the operating system, reminders shall respect the device's Do Not Disturb settings.

The application shall not attempt to bypass system notification controls.

SRS-FR-108

Requirement Name

Reminder Actions

Description

Reminder notifications shall provide contextual actions such as:

- Open Prayer
- Open Hymn
- Start Routine
- Snooze
- Mark as Completed
- Dismiss

Selecting an action shall navigate directly through the Intelligent Navigation Engine (INE).

SRS-FR-109

Requirement Name

Smart Reminder Adaptation

Description

If enabled by the user, the Reminder Engine may adjust future reminder suggestions based on completed routines and preferred prayer times.

The application shall never automatically change user-defined schedules without explicit confirmation.

SRS-FR-110

Requirement Name

Reminder History

Description

The application shall maintain a local history of reminder interactions for optional review and personalization.

Users shall be able to clear or disable this history at any time.

SRS-FR-111

Requirement Name

Recurring Schedules

Description

The Reminder Engine shall support recurring schedules including:

- Daily
- Weekly
- Monthly
- Specific weekdays
- Specific dates

- Liturgical events
 - User-defined custom intervals
-

SRS-FR-112

Requirement Name

Multiple Reminder Profiles

Description

Users may create separate reminder profiles such as:

- Personal
- Family
- Choir Practice
- Retreat
- Lent
- Advent

Profiles shall be activated manually or according to predefined schedules.

SRS-FR-113

Requirement Name

Offline Reminder Engine

Description

All reminders shall continue functioning without internet connectivity by using the device's local scheduling mechanisms.

SRS-FR-114

Requirement Name

Reminder Performance

Description

Performance targets:

- Schedule reminder < 50 ms
 - Cancel reminder < 50 ms
 - Notification generation < 100 ms
 - Liturgical calculation < 200 ms
 - Daily schedule generation < 300 ms
-

SRS-FR-115

Requirement Name

Future Calendar Extensions

Description

The Liturgical Calendar architecture shall support future extensions including:

- Diocese-specific celebrations
- National feast days
- Parish patronal feasts
- Multiple liturgical calendars
- Language-specific calendar names

Future updates shall be delivered through structured content packages where appropriate.

Future Expansion

The Reminder Engine shall support future capabilities including:

- Calendar synchronization
- Wearable device notifications
- Parish event reminders
- Shared family routines
- Parish-wide devotional schedules
- AI-assisted reminder suggestions (optional)
- Location-aware reminders (optional)

All future enhancements shall preserve user privacy and remain optional.

Module Acceptance Criteria

The Reminder Engine & Liturgical Calendar Module shall be considered complete when:

- Users can create and manage prayer reminders.
- Reminder routines function reliably.
- Liturgical seasons and feast days display correctly.
- Seasonal recommendations align with the liturgical calendar.
- Quiet hours and Do Not Disturb settings are respected.
- Notifications provide contextual actions and integrate with the Intelligent Navigation Engine.
- All reminder functionality operates offline.
- Performance targets are consistently achieved.
- Users retain full control over reminders and personalization.
- Future calendar extensions can be added without architectural redesign.

Chapter 3 – Functional Requirements

Module 3.8 — Settings, Personalization & Accessibility Module

Module Overview

Purpose

The Settings, Personalization & Accessibility Module provides users with complete control over the application's appearance, behavior, reading experience, privacy preferences, accessibility options, and personalization settings.

The module shall centralize all configurable features into a simple, well-organized interface while preserving the application's principles of Sacred Simplicity, Offline First, Privacy by Design, and Accessibility by Default.

The module shall ensure that every user—from children to elderly parishioners—can comfortably use the application regardless of device capability or accessibility needs.

Design Philosophy

The Settings Module shall:

- Be simple and uncluttered.
 - Group related settings logically.
 - Apply changes instantly.
 - Never require restarting the application.
 - Preserve user preferences locally.
 - Remain fully functional offline.
-

Responsibilities

The module shall:

- Manage appearance.
- Manage themes.
- Manage typography.
- Manage language preferences.
- Manage personalization.
- Manage accessibility.

- Manage privacy preferences.
 - Manage notification preferences.
 - Manage content packages.
 - Manage application information.
-

Dependencies

The module depends upon:

- Theme Engine
 - Typography Engine
 - Accessibility Engine
 - Privacy Engine
 - Reminder Engine
 - Content Engine
 - Personalization Engine
 - Local Database
 - Secure Storage
-

SRS-FR-116

Appearance Settings

Users shall configure:

- Light Theme
- Dark Theme
- Sepia Theme
- AMOLED Black Theme
- System Theme

Theme changes shall apply immediately across the application.

SRS-FR-117

Typography Settings

Users shall configure:

- Font Size
- Font Family
- Line Height
- Paragraph Spacing
- Reading Width
- Font Weight (where supported)

Changes shall update instantly without restarting the Reader.

SRS-FR-118

Reading Preferences

Users shall configure:

- Focus Mode
 - Choir Mode
 - Elder Mode
 - Keep Screen Awake While Reading
 - Remember Reading Position
 - Auto-hide Reader Controls
 - Animation Preferences
-

SRS-FR-119

Language Preferences

The platform architecture shall support multiple languages.

Version 1 shall include English.

Future versions shall support:

- Krio
- French
- Latin
- Additional diocesan translations

Language switching shall not affect user data.

SRS-FR-120

Accessibility Settings

Users shall configure:

- High Contrast
- Large Text
- Extra Large Text
- Reduce Motion
- Screen Reader Optimization
- Haptic Feedback
- Touch Target Size

Accessibility settings shall apply consistently throughout the application.

SRS-FR-121

Privacy Settings

Users shall configure:

- Reading History
- Search History
- Analytics Participation
- Crash Reporting
- Reminder History
- Local Data Management

Privacy settings shall default to the most privacy-preserving configuration.

SRS-FR-122

Notification Settings

Users shall configure:

- Reminder Frequency
- Quiet Hours
- Notification Sounds
- Vibration
- Prayer Routine Notifications
- Liturgical Notifications

All notifications shall remain optional.

SRS-FR-123

Personalization Settings

Users shall control:

- Recommendation Intensity
- Companion Suggestions
- Dashboard Personalization
- Continue Reading
- Seasonal Recommendations
- Reading Statistics

Users may disable personalization entirely.

SRS-FR-124

Content Package Management

Users shall:

- View installed content packages.
- View package versions.
- Check for optional updates (when online).
- Enable or disable optional content packs.
- View package information.

Core prayer content shall remain protected.

SRS-FR-125

Backup & Restore Preferences

Future versions shall support:

- Local encrypted backup.
- Manual restore.
- Cloud synchronization (optional).
- Export user workspace.

No backup shall occur without explicit user consent.

SRS-FR-126

About Application

The application shall display:

- Version Number
- Build Number
- Diocese Information
- Credits
- Licenses

- Privacy Policy
 - Terms of Use
 - Open Source Libraries
-

SRS-FR-127

Feedback & Support

Users shall be able to:

- Report issues.
- Submit feature suggestions.
- Contact the development team.
- View FAQs.

Feedback shall remain optional and may require internet connectivity.

SRS-FR-128

Settings Synchronization (Future)

If cloud synchronization is enabled in future versions, user preferences may synchronize across devices after explicit authentication and user consent.

Offline functionality shall remain unaffected.

SRS-FR-129

Settings Performance

Performance targets:

- Settings screen < 200 ms
 - Theme change < 100 ms
 - Typography update < 100 ms
 - Accessibility update < 100 ms
 - Preference save < 50 ms
-

SRS-FR-130

Offline Settings

All settings shall remain fully functional without internet connectivity.

Changes shall persist locally and take effect immediately.

Future Expansion

The Settings architecture shall support:

- Theme marketplace
 - Additional reading layouts
 - Diocese branding packs
 - Family profiles
 - Device synchronization
 - Accessibility profiles
 - Advanced developer settings
 - Experimental feature toggles
-

Module Acceptance Criteria

The Settings, Personalization & Accessibility Module shall be considered complete when:

- Users can easily configure all application preferences.
- Appearance and typography changes apply instantly.
- Accessibility features work consistently across all modules.

- Privacy controls are comprehensive and easy to understand.
- Notification and personalization settings are fully configurable.
- Content packages can be managed safely.
- The application remains fully functional offline.
- Performance targets are consistently achieved.
- The settings architecture supports future expansion without redesign.

Chapter 3 – Functional Requirements

Module 3.9 — Content Management & Content Engine Module

Module Overview

Purpose

The Content Management & Content Engine Module is responsible for storing, organizing, validating, indexing, and serving all official content used throughout Makeni Prayer Book: Catholic Companion.

Unlike a simple PDF viewer, the Content Engine manages structured content that can be searched, categorized, filtered, recommended, and rendered consistently across all modules.

The engine shall preserve the integrity of the official Makeni Prayer Book while supporting future expansion through additional Catholic content packages.

Design Philosophy

The Content Engine shall:

- Preserve official content exactly as approved.

- Store structured rather than page-based content.
 - Separate official and user-generated data.
 - Operate entirely offline.
 - Support scalable content packages.
 - Maintain content integrity and versioning.
-

Responsibilities

The Content Engine shall:

- Store prayers.
 - Store hymns.
 - Store metadata.
 - Store categories.
 - Store liturgical information.
 - Store indexes.
 - Validate content.
 - Serve structured content.
 - Support future content updates.
 - Build search indexes.
 - Protect official content.
-

Dependencies

The Content Engine depends upon:

- Local Database
 - Search Engine
 - Reader Engine
 - Recommendation Engine
 - Rule Engine
 - Configuration Engine
-

SRS-FR-131

Structured Content Storage

All official content shall be stored in structured format rather than PDF pages.

Each item shall include:

- Unique identifier
 - Official title
 - Prayer/Hymn number
 - Content body
 - Metadata
 - Category
 - Keywords
 - Page reference
 - Liturgical tags
 - Version
-

SRS-FR-132

Content Integrity

The application shall ensure that official prayers and hymns cannot be modified by users.

User-generated content shall remain completely separate.

Official content shall be treated as read-only.

SRS-FR-133

Metadata Management

Each prayer and hymn shall include metadata supporting:

- Search
- Navigation
- Recommendations

- Categories
 - Liturgical filtering
 - Reading statistics
 - Future AI-assisted discovery
-

SRS-FR-134

Content Versioning

Each official content package shall include version information.

The application shall detect newer package versions and support optional updates without affecting personal data.

SRS-FR-135

Content Package Support

The architecture shall support installable content packages, including:

- Makeni Prayer Book
- Catholic Bible (future)
- Catechism (future)
- Novenas
- Rosary Guides
- Saints
- Diocese Resources
- Daily Readings

Packages shall remain modular and independently versioned.

SRS-FR-136

Search Index Generation

The Content Engine shall generate and maintain indexes for:

- Full-text search
- Title search
- Numeric lookup
- Categories
- Keywords
- Liturgical references

Index updates shall occur automatically whenever content packages change.

SRS-FR-137

Cross References

The Content Engine shall support relationships between content items, including:

- Related prayers
- Related hymns
- Liturgical links
- Seasonal links
- Future Bible references
- Future Catechism references

These relationships shall enhance navigation without modifying the official text.

SRS-FR-138

Content Validation

Before a content package becomes available, the application shall verify:

- Schema validity
- Required metadata

- Internal consistency
- Duplicate identifiers
- Checksum or digital signature (where applicable)

Invalid packages shall not be loaded.

SRS-FR-139

Content Caching

Frequently accessed structured content shall be cached locally to reduce loading times and improve responsiveness.

Caching shall never compromise content integrity.

SRS-FR-140

Content Performance

Performance targets:

- Load content item < 100 ms
 - Build search indexes < 2 s (initial install)
 - Retrieve metadata < 20 ms
 - Package validation < 500 ms
 - Cache retrieval < 20 ms
-

SRS-FR-141

Offline Content

All installed content shall remain fully available without internet connectivity.

Internet access shall only be required for optional package downloads or updates.

SRS-FR-142

Content Update Safety

Updating a content package shall never overwrite:

- Bookmarks
- Favorites
- Notes
- Highlights
- Journal entries
- Reading history
- User collections

The Content Engine shall migrate personal references safely when content versions change.

SRS-FR-143

Future Content Marketplace

The architecture shall support a future content marketplace where users may download approved Catholic resources published by dioceses or authorized organizations.

Only authenticated and verified content packages shall be installable.

Module Acceptance Criteria

The Content Management & Content Engine Module shall be considered complete when:

- Official content is stored in structured form.
- Content remains immutable for users.

- Metadata supports all platform features.
- Search indexes are accurate and performant.
- Package validation prevents invalid content from loading.
- Updates preserve all user-generated data.
- All installed content is available offline.
- Future content packages can be integrated without architectural redesign.

Chapter 3 – Functional Requirements

Module 3.10 — Privacy, Analytics & Feedback Module

Module Overview

Purpose

The Privacy, Analytics & Feedback Module ensures that Makeni Prayer Book: Catholic Companion respects user privacy while providing optional analytics, crash reporting, and user feedback capabilities to improve the application.

The module follows the principle of **Privacy by Design**, ensuring that all personal data remains under the user's control and that analytics are anonymous, minimal, and strictly opt-in.

Design Philosophy

The module shall:

- Protect user privacy by default.
- Collect only essential anonymous data.
- Never monetize user information.
- Keep personal spiritual content private.

- Give users full control over data sharing.
 - Be transparent about all data collection.
-

Responsibilities

The module shall:

- Manage privacy preferences.
 - Manage analytics consent.
 - Collect anonymous usage analytics (optional).
 - Collect crash reports (optional).
 - Handle user feedback.
 - Provide data export and deletion.
 - Display privacy information.
 - Operate with user consent.
-

Dependencies

The module depends upon:

- Configuration Engine
 - Analytics Engine
 - Secure Storage
 - Local Database
 - Settings Module
-

SRS-FR-144

Privacy Center

The application shall provide a dedicated Privacy Center where users can:

- Review privacy settings.
- Manage analytics consent.

- Manage crash reporting consent.
 - Manage feedback preferences.
 - View data storage information.
 - Delete local data.
 - Export personal data.
-

SRS-FR-145

Analytics Consent

Analytics collection shall be disabled by default.

Users may explicitly enable anonymous analytics.

Consent shall be revocable at any time.

SRS-FR-146

Anonymous Usage Analytics

If enabled, the application may collect anonymous metrics such as:

- App launches.
- Screen usage.
- Feature usage.
- Search frequency.
- Reminder usage.
- Theme preferences.
- Performance metrics.

Analytics shall never include personal prayer content or identifiable user information.

SRS-FR-147

Crash Reporting

Users may opt in to anonymous crash reporting.

Crash reports may include:

- Device model.
- Operating system version.
- Application version.
- Stack traces.
- Error logs.

Crash reports shall never include:

- Prayer journal entries.
 - Notes.
 - Bookmarks.
 - Favorites.
 - Prayer history.
 - Official prayer content.
-

SRS-FR-148

User Feedback

The application shall allow users to:

- Report bugs.
- Suggest features.
- Report content issues.
- Share general feedback.

Feedback submission may require an internet connection.

SRS-FR-149

Data Export

Users shall be able to export their personal data, including:

- Bookmarks.
- Favorites.
- Notes.
- Journal entries.
- Collections.
- Reading history.
- Settings.

Exports shall not include copyrighted official content unless licensing permits.

SRS-FR-150

Local Data Deletion

Users shall be able to:

- Delete reading history.
- Delete search history.
- Delete notes.
- Delete journal entries.
- Delete favorites.
- Delete bookmarks.
- Reset personalization.
- Perform a complete local data reset.

Deletion shall require confirmation.

SRS-FR-151

Transparency

The application shall clearly explain:

- What data is collected.
- Why it is collected.
- Whether it is stored locally or transmitted.
- How users can disable collection.

Privacy information shall be written in clear, non-technical language.

SRS-FR-152

Analytics Performance

Performance targets:

- Consent update < 50 ms.
- Preference save < 50 ms.
- Analytics event processing < 10 ms.
- Crash report preparation < 100 ms.

Analytics processing shall never noticeably impact application performance.

SRS-FR-153

Offline Privacy

Privacy settings and local data management shall function entirely offline.

Feedback submission and analytics uploads shall be deferred until internet connectivity is available, if the user has opted in.

SRS-FR-154

Future Privacy Enhancements

The architecture shall support future capabilities including:

- Encrypted cloud backups.
 - Multi-device synchronization with end-to-end encryption.
 - User-managed encryption keys.
 - Privacy audit reports.
 - Advanced consent management.
 - Regional privacy compliance extensions.
-

Module Acceptance Criteria

The Privacy, Analytics & Feedback Module shall be considered complete when:

- Users have full visibility and control over data collection.
- Analytics and crash reporting are disabled by default.
- Personal spiritual content is never transmitted without explicit user action.
- Data export and deletion function correctly.
- Privacy information is transparent and understandable.
- Performance targets are consistently achieved.
- The module operates reliably in both offline and online scenarios.
